Designating a class requires an iPod

Navigate to STORM as usual and select Class Information from the menu list.

Select the term.

Select a class you teach or alternately search for a class by subject (usually restricted to administrative personnel).

With your class selected, click on the “Class Options” button.
Under Class Options you will find a section called “Duke Digital Initiative”. From this location you can toggle on (or off if necessary) whether this course requires an iPod. Once the course is designated as requiring an iPod it will appear in all class searches by faculty, staff and students. The default indicator for all classes is “Does NOT require”.

Note: For cross-listed classes, you should make your selection each section of the class. For example, if the class above is cross-listed with a HISTORY section, you should make the designation here and in the HISTORY section.
