STUDENT SELF EVALUATIONS VIA VIDEO
LARRY BOHS, KEVIN CAVES, RICHARD GOLDBERG
Department of Biomedical Engineering

- OVERVIEW
Students in BME 260: Devices for People with Disabilities, create and deliver a custom project to a person in the community. During the semester, several oral presentations allow them to describe their progress. Students view video recordings of their own presentations, and comment on them, to hone their speaking skills.

- OUTCOMES
Students find the recordings useful for learning about their speaking style, and for improving their effectiveness as presenters.

- TECHNOLOGY USED
- VCR recording
- Duplication onto DVD for distribution to students.

- SPONSORS
- CIT (funds for recording and duplication)

The direct feedback provided by video recordings has made a big difference in how fast students improve their presentation skills.
